## **JBF 38-54 Hard Drive Static Media Destroyer**

### **[ShreddingMachines.co.uk](http://ShreddingMachines.co.uk)**

This Shredder is exclusively distributed in the UK by Don Ruffles Limited ([ShreddingMachines.co.uk](http://ShreddingMachines.co.uk)) and is designed to completely destroy Hard Drives and Discs and other media products to either 25mm or 30mm particles (depending on the model chosen) The 38/50 Shredder is manufactured to our customer's specifications and is therefore available with various options for feeding including exit and entry conveyors.

With a cutting zone of approx. 380 x 540 mm this Shredder has a very impressive throughput of up to 600 Hard Drives per hour. (The 25mm Shredder has a throughput of up to 400 HDs per hour).

Mounted on an extremely robust steel support frame that is designed to accept a standard 240 litre wheelie bin with optional conveyor feed and exit available.

The cutting shafts can be individually changed and re-sharpened with the cutters being made from hard wearing hardened steel. The connection between shafts and knives is by means of extra strong multi-key latching and a split cutting block which allows the complete knife shafts to be lifted out of the housing for quick exchange.

The powerful 7.5 kW motor generates enormous torque to drive the two slow revolving cutting shafts at just 16 revolutions per minute and this low RPM eliminates the risk of spontaneous combustion experienced by other manufacturers.

Further Health and Safety features include safety limit switches on the doors and hopper prevent any unauthorised operation of the shredder and an Emergency Stop button if required.

Also available as a Mobile unit which can be mounted on a suitable vehicle. It is possible to manufacture a modified version to suit various vehicle bodies for Mobile Destruction.

### **Specifications:**

Shreds: Hard Drives to 5.5", CD/DVD Stacks, Video Tapes, Typewriter Ribbon, Retaining Tape  
Capacity: Up to 600 Hard Drives per Hour with the 30mm Shredder and up to 400 on the 25mm Machine.

Shred Size: Standard 25 or 30mm Particles.

Throat Width: 1165 x 700mm. Cutting Zone: 380 x 540mm

Motor: 7.5kW. Voltage Cycle: 3-Phase x 400/50v/Hz

Dimensions (W\*D\*H): 2500x1400x2500mm

Weight 1350kg

Machine and Cutter Warranty: 1 year\*\*

A manufacturer's demonstration is available on request.

\*\*Cutter warranties are for parts only and do not include labour or general wear and tear of Cutting Cylinders, Spacers, and Drive System. Please note that Computer Hard Drives and other optical media contain magnetic parts which by their nature will attach themselves to any metal surfaces including cutters, spacers etc. It is an absolute necessity therefore that these magnetic parts have to be removed from the machine Screen on a weekly basis or earlier if the capacity throughput of the unit reduces.
