INTRODUCTION

Introducing our innovative DD Imager Camera Audit System – the perfect solution for complete media destruction auditing.

Capture high quality before and after images to accompany detailed erasure records, ensuring the utmost security and compliance for your data disposal needs.

Designed with user-friendliness in mind, the DD Imager effortlessly integrates with our Data Destruction Auditor software. This setup allows for a seamless data management experience, eliminating unnecessary complexities in the auditing process. The DD Imager adds invaluable visual proof to your erasure records.

The DD Imager not only capture these crucial images but also perfectly incorporates them into erasure certificates. This feature ensures that every step of the media destruction process is meticulously documented, enhancing compliance with industry standards and bolstering your organization's data security protocols.

With our system, you can confidently navigate the complex landscape of data disposal, knowing that every detail is accounted for and safeguarded.

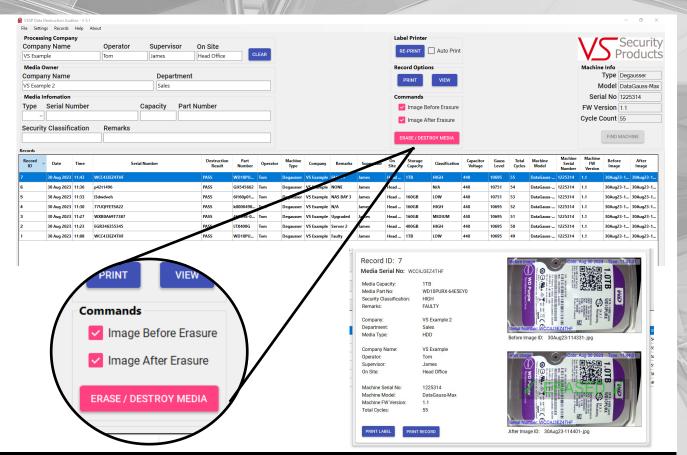

OPERATION

The Verity Systems DD Imager works within the Data Destruction Auditor. The process is quick and easy to use.

- 1. The DD Imager is enabled for use within the Data Destruction Auditor (in settings).
- 2. Select required commands i.e. image before and after erasure/destruction.
- 3. A prompt will come up asking for before pictures (if selected).
- 4. Media will be erased.
- 5. A second prompt will come up for after picture (if selected).
- 6. Record will be saved with an individual ID.
